Art Unit: 3736

DETAILED ACTION

1. This Office Action is responsive to the amendment filed 2/5/2007. Claims 34-41 are cancelled, rendering the previous drawing objections and §112 rejections moot. Claims 24-25 are amended, overcoming the previous §112 rejections. Claims 23-33 and 42-43 remain pending.

Claim Rejections - 35 USC § 103

- 2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
- 3. Claims 23-33 and 42-43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamato et al (US Pat No. 5957870) in view of Hershler et al (Angle-Angle Diagrams in the Assessment of Locomotion).
- 4. Please see the Office Action dated 10/3/2006 for complete details.

Response to Arguments

5. Applicant's arguments filed 2/5/2007 have been fully considered but they are not persuasive. Applicant contends that Hershler et al teach away from generating a cyclogram based on first set of data and a second set of data and determining a value of a characteristic of the generated cyclogram, wherein the first and second set of data pertain to angles of a joint of a first and second limb respectively because Hershler et al only teach generating a cyclogram based on different joints of the same limb. While the Examiner agrees that Hershler et al do only specifically teach generating a cyclogram based on different joints of the same limb, it is noted

Application/Control Number: 10/613,116

Art Unit: 3736

that Hershler et al have simply been relied upon in the above §103 rejection for the teaching of generating a cyclogram based on a first and second set of data, even though that data may be joint angles from the same limb. However, when combined with the teachings of Yamato et al, the result would still encompass generating a cyclogram based on the first and second set of data and determining a value of a characteristic of the generated cyclogram, wherein the first and second set of data pertain to angles of a joint of a first and second limb. It is evident that incorporating data from a first and second set of data is well within the scope of Hershler et al and would result in the desired combination as motivated by the reasons previously discussed.

Page 3

The Examiner would like to note that the method claims do not include a positive step for 6. quantifying the asymmetry of the joint angles of the two limbs during a movement, which currently is only recited in the preamble of the claim, and that said claims do not specifically recite determining a first and second set of angle data from the same joint of said first and second limb, as found in the invention, and only recite determining a first and second set of angle data from a joint. It is also noted that such amendments to the claims would require a new search consideration given the inclusion of such limitations significantly narrow the scope of the claims.

Conclusion

7. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after Art Unit: 3736

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
